european taxes have long been debated for their potential role as barriers to increased investment and welfare the discussion has often circulated around the size of the tax bases and the magnitude of the tax rate in this book we argue that in the taxation context the european union eu is at a cross road facing strong forces pushing it into two polar positions one of these is the scenario with all welfare provided by the national regime and financed by taxes collected entirely by national authorities the other extreme is the situation where all welfare is ferred at an eu level financed entirely by taxes collected at that level the two forces pressing the tax situation into one of these two poles are spelt tax competition and welfare arbitrage the research question addressed in this book covers the existence of a potential steady state in between these two poles our basic pothesis is that their might be such a steady state due to the immobility of some tax bases and where the taxation of these bases have no externalities affecting vestment we argue that the very complex tax structures of europe and the tax certainty facing investors in europe need to be addressed in a comprehensive way
